Art Unit: 1625

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Applicants' comments have been noted and considered but are not deemed persuasive of patentability.

Ring substituents a-k is not defined thereby rendering the claims substituted heteroaryl, heterocyclyl and substituted heterocyclyl are not enabled. Notwithstanding applicants' comments to the contrary, there is no reason, assurance or disclosure to support the diverse genus of compounds possessing the alleged properties.

The instant specification invites the skilled artisan to experiment. The factors which must be considered in determining undue experimentation are set forth in Ex parte Forman 230 USPQ 546. The factors include:

- 1) quantity of experimentation necessary,
- 2) the amount of guidance presented,
- 3) the presence or absence of working examples,
- 4) the nature of the invention,
- 5) the state of the prior art,
- 6) the predictability of the art,
- 7) breadth of the claims and

8) the level of skill in the art.

For example, purine containing derivatives do not have utility and usually attach as nucleotides and are not known to have the same utility. See lines 1-12 page 8. no data in the specification suggests purine derivatives have the same utility as derivatives containing other heteroaryl and heterocyclyl substituents.

No claim is allowed.
